Science has become a new religion, with its own dogmas, rituals, and priests. And just like any other religion, it can be used to justify intolerance, persecution, and even violence.

Science delusion is a serious problem, and it's one that we need to address if we want to create a more just and equitable world.

What is Science Delusion?

Science delusion is a belief that science is the only source of truth and that anything that cannot be proven scientifically is simply not true. This belief is often accompanied by a dogmatic adherence to scientific theories and a rejection of any evidence that contradicts those theories.

Science delusion can lead to a number of problems, including:

- Intolerance of dissent: Science delusionists often view anyone who disagrees with their beliefs as being ignorant or irrational. This can lead to a hostile and intolerant environment for those who hold different views.
- Persecution of heretics: In some cases, science delusionists have gone so far as to persecute those who they believe are heretics. This persecution can take many forms, from verbal abuse to physical violence.
- Violence: In the most extreme cases, science delusion can lead to violence. This violence is often justified as being necessary to protect the truth from those who would seek to destroy it.

The Appetite for Wonder

One of the most important things that science can give us is a sense of wonder. The universe is a vast and mysterious place, and science can help us to understand it better. But when science becomes a religion, it can actually stifle our sense of wonder.

Science delusionists often view the universe as a cold and机械论tic place. They believe that everything can be explained by science, and that there is no room for mystery or wonder.

But this is a narrow and limited view of the universe. Science can only tell us so much about the world around us. There are still many mysteries that science cannot explain, and there is still much room for wonder.

The appetite for wonder is a natural human desire. It is what drives us to explore the unknown and to seek out new knowledge. It is what makes us

human.

Science can help us to satisfy our appetite for wonder, but it cannot replace it. Science can tell us how the universe works, but it cannot tell us why. Science can help us to understand the world around us, but it cannot give us meaning.

Meaning is something that we must find for ourselves. It is something that we must create. And it is something that we can find in many different places, including science, religion, art, and philosophy.

Science is a powerful tool, but it is not the only source of truth. There is still much that we do not know about the universe, and there is still much room for wonder. We should embrace science for what it can tell us, but we should not let it blind us to the mysteries that still lie before us.

The appetite for wonder is a natural human desire. It is what drives us to explore the unknown and to seek out new knowledge. It is what makes us human.

Let us not let science delusion stifle our appetite for wonder. Let us embrace the mysteries of the universe and let them inspire us to create a better world.
